Comprehensive Data Protection from UCG Technologies

Your organization needs to be thinking differently about your backup & disaster recovery strategy

Concerns of the Industry

- Inefficient manual backup processes
- Effectively storing data offsite
- Developing and testing a concrete disaster recovery plan
- Efficient access to data in disaster scenario for necessary users
- Risk of cyber security attack
- Declining IT staff and resources

The true cause of the above concerns is an organization’s status quo - 80% of IBM i users currently backup to tape and 40% of companies have no DR plan at all. Don’t wait for a disaster to take action.

The new way to ensure cost-effective safety

- Automated cloud backup
- Two (2) remote sites - redundant storage, power, internet pipe, firewalls, etc.
- Data encryption at all times - in-flight and at-rest
- Fully managed remote hardware DR, including remote VPN access for necessary users
- Regularly simulated phishing tests and cyber security training

Potential “landmines” in solutions to avoid

- Single point of storage - no redundancy
- Misleading data analysis, compression/de-dup ratios, sizing of necessary computer resources for backup and DR
- Large scale cloud storage with difficult recovery
- Inability to meet RTO/RPO

Don’t get caught like the many organizations we’ve seen with inefficient exposed backup data and no DR plan!
What VAULT400 has to offer

Backup
- Native software agent schedules backups to the UCG cloud based on your retention scheme
- Client data is backed up to two data centers in US or two data centers in Canada
- AES bit 256 encryption in-flight and at-rest - Only client has the encryption key
- Detailed data analysis to ensure proper sizing

Disaster Recovery as a Service
- UCG provides “hands-off” DR - fully managed recovery
- 60 days remote VPN access available to unlimited users in event of disaster
- Documented reports to ensure defined SLAs are met

Managed Service Cyber Security Training
- Fully managed phishing tests
- Detailed reporting of results
- Fully managed administration of custom online cyber security training

VAULT400 Cloud Backup & DRaaS is an IBM Server Proven Solution.
